

ABSTRACT OF THE DISCLOSURE

An entrance sealing assembly for a hinged door of a laundry dryer provides a complete sealing of all gaps between the essential components of the entrance sealing assembly. The laundry dryer includes a door frame, the door frame being provided with a door glass; a frame cover having a frame cover panel in which an entrance hole is formed for
5 receiving the door frame, the frame cover panel having an inner end surface; a front support, coupled with the frame cover, for supporting a drum, the front support having an inner end surface; and a unified sealing member having first and second ends, disposed between the frame cover and the front support, the second end of the unified sealing member providing for
10 contact with the door glass when the hinged door is closed.
